January 2008

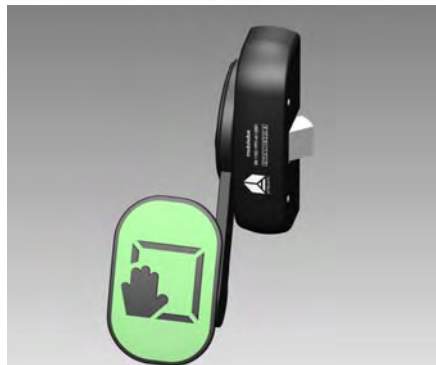

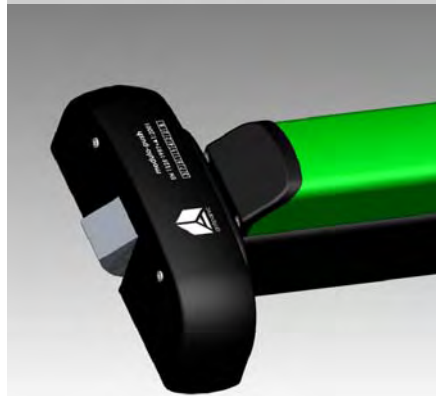

I know it's only been a few weeks since the last newsletter but we have had to bring this one forward to inform everyone of the important launch of the new Strand Antipanic range of panic and emergency exit hardware scheduled for January 2008 to replace the existing Strand Feb series.

Designed and manufactured in Italy this new range offers the customer a more modern and aesthetically pleasing design with greater flexibility and reduced stock holding due to the components being interchangeable, fully reversible and an outside access device to fit push bar, push pad and touch bar ranges.

The comprehensive range offers single point, 3 point latch & 3 point bolt with full width crossarm, push pad or touch bar and a high security mortice device for aluminium doors available in a variety of powder coated and plated finishes that are available ex stock.

We are currently in the process of mailing the new catalogue and price list out to all customers, however in the meantime if you require additional copies or further information please do not hesitate to contact us by phone on 01922 639111 or email at: info@strandhardware.co.uk
