July 2009

Welcome to the summer edition of Newstrand. With the continuing economic slowdown fewer companies are launching new products and in most cases are severely cutting back on investment into product development. This initially will appear to be a good idea as it obviously results in considerable short term cost savings, but not so good for long term growth of any business if you are solely reliant on achieving this from your existing product portfolio. This is why we are bucking the trend in this area by substantially investing in the future of the business which has resulted in the three new products we have already launched and which are featured in this edition. This will strengthen our already successful and extensive range of panic hardware and window/door fittings and offer our customers greater flexibility and choice. More innovative products are scheduled for launch later this year which will be included within the next newsletter.

For further information on any of the products featured you can phone us on 01922 639111, fax: 01922 626025 or e-mail: info@strandhardware.co.uk

PH381

D7095 Surface Mounted Restraining Stay

As a result of customer demand we have decided to produce a surface mounted version of the already popular D6095 mortice restraining stay for doors. It has the same features as the D6095 mortice version with its adjustable friction block and restricted opening of the door around 90 degrees depending upon the fixing position. With its slimline channel and arm assembly that can have a variety of plated finishes, it offers a very discreet and aesthetically pleasing design to complement any finished door. More importantly as fitting only takes a few minutes a considerable time and cost saving can be made by the door manufacturer/end user.

Surface mounted so quick and easy install

Suitable for timber, aluminium or steel

Adjustable friction

Allows opening between 90-100 degrees

Available in a variety of plated finishes for both the channel and arm assembly

PH381 Electronic Outside Access

Until now projects having escape doors that are also required to have access control have involved either using an electric striker or an electric panic device linked to the access control system which both work fine but are limited to only offering single point devices.

Now, with the introduction of the PH381 electronic outside access device can be used with 2 or 3 point devices as well as single point devices from the push bar, push pad and touch bar range. The unit can be linked to a variety of access control systems including swipe card entry and proximity readers.

The unit has adjustable timed opening of 3 – 20 seconds with the opening indicated by means of a green LED and audible signal allowing engagement of the lever for entry. There is also mechanical key over-ride as standard.

- Quick and easy to install—the unit can be retro-fitted to existing Strand Antipanic Devices
- Adjustable timed opening 3 - 20 seconds with green LED and audible signal
- Compatible with all single or 2/3 point devices including touch bars
- 12–24v AC/DC power supply
- Mechanical key over – ride
- Reversible lever

Following the success of our previous golf days, Strand Hardware are holding their fourth Charity Day on Thursday, 16th July 2009

Again we hope to raise lots of money for the Oncology Unit at the Birmingham Children's Hospital.

We hope that we can count on your support again for such a worthy cause. Even if you have decided not to join us for the day we would appreciate a donation for the Birmingham Children's Hospital

Look out for news of the Golf day in the next issue of NEWSTRAND
