The safety features of this exit device are of fundamental importance to ensure its compliance with standard EN179. No modifications of any kind to the device other than those described in the fitting instructions are permitted.

This panic device may be fitted to fire or smoke door assemblies.

Attention: Exit devices shall not include dogging (hold unlocked) when fitted to fire or smoke door assemblies - dogging can only be used on escape doors.

For recessed situations the PH4303

should be turned 90 degrees to door

face as shown - see page 4 (striker applications)

depending on recessed, flush

This measurement should be established before holes are

FIXING HOLES

FOR MECHANISM

FFL

Measurement Z varies

or stepped applications.

IMPORTANT:

Before the fitting of Outside Access Device (OAD) onto a door it is important to establish the correct position of the centre mechanism and appropriate striker.

For flush applications the striker should be mounted on frame as shown. 1mm packers are provided with each striker

For stepped applications 4 - 8mm the striker can be rotated 180° as shown here.

Position flat plate F1 beneath

Ē

Fix the centre mechanism onto door at appropriate height - push pad should be positioned between 900 - 1100mm from FFL ensuring good contact with centre striker.

remove screws V3. Remove bracket E and securing plate D Rotate crossarm bracket upwards as shown in illustration Rotate bracket E 180° and re-secure with plate D - Now replace V3 screws

drilled into door section mechanism as shown. If used FIXING PLATES F* in conjunction with an OAD use F2 plate with integral cam - this plate is supplied with all outside access devices (ensure cam is positioned as shown) . O PH4303 80 Flush

Push Pad Insert After fitting cover onto centre mechanism, the pad can be inserted into support bracket and grub screw GR1 can be fully tightened.

The photoluminescent insert can now be placed onto pad as shown

The safety features of this exit device are of fundamental importance to ensure its compliance with standard EN179. No modifications of any kind to the device other than those described in the fitting instructions are permitted.

This panic device may be fitted to fire or smoke door assemblies.

Attention: Exit devices shall not include dogging (hold unlocked) when fitted to fire or smoke door assemblies - dogging can only be used on escape doors.

Fix the centre mechanism onto door section at appropriate height (push pad should be positioned between 900 - 1100mm from FFL) ensuring good contact with centre striker.

Fix top and bottom pullmans ensuring good contact with top and bottom strikers

Cut threaded rods to size (X + 25mm & Y + 25mm)

Insert threaded rod B into connector A with lock-nuts C as shown.

Push RG rubber grommets over thread (2 per rod)

Insert threaded rod into riv-nut D of pullman latch and rotate.

Push connector A over bush of centre mechanism as shown.

Insert M4 screws E to secure connector in place

After final adjustments of rods are made, secure all lock-nuts making sure that all of the connections are tight.

Care should be taken to ensure any lost motion is prevented by adjustment of threaded rods and lock-nuts.

Length of threaded rods:

X + 25mm

Y + 25mm

Length of rod covers:

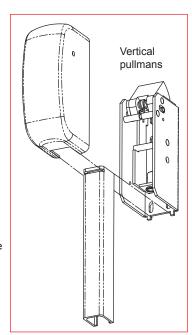

X - 1.5mm

Y - 1.5mm

Floor strikers should be mounted on floor as shown. If aluminium low threshold strips are used the striker should be notched into aluminium section to comply with current legislation.

RG Secure pullman covers in place with V2 screws. The blanking plate BP can be inserted to hold centre latch retracted when not required. i.e. for the slave leaf of a pair of doors. Secure mechanism covers in place with V2 screws Secure pullman D covers in place with V2 screws

IMPORTANT: Before the fitting of an Outside Access Device onto a door it is important to establish the correct position of the centre mechanism and appropriate strikers.

Ensure rubber washers RG are pushed over threaded rods to prevent any vibration or rattle.
