

Preparation of surfaces

The surfaces must be dry, free of dust, grease, oil and release agent. To clean the surfaces only use clean cloths materials using compatible solvents.

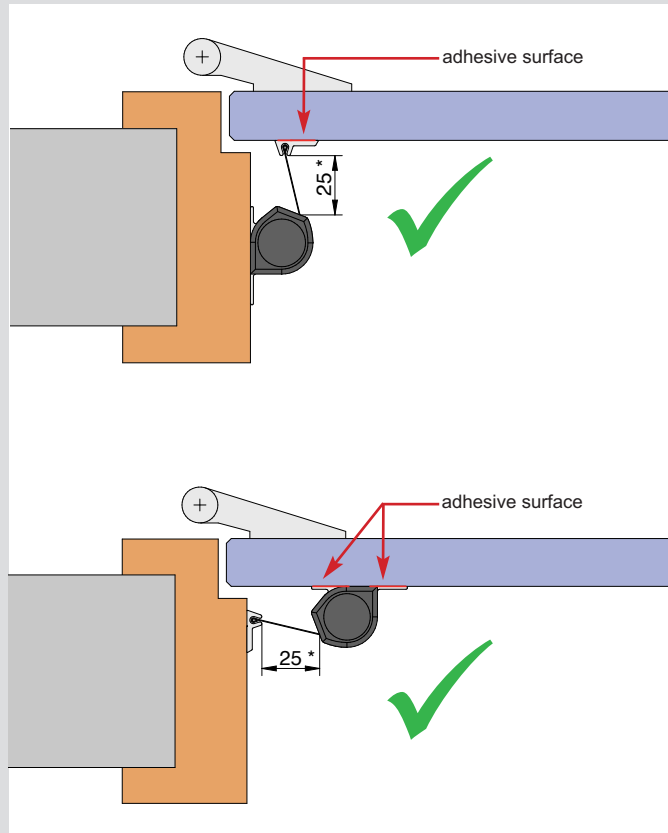

Handling

- The most favorable temperature of treatment is between +18°C and +35°C. At low temperatures, the initial strength of the bond is reduced.
- When pressing, Position it carefully and correctly. Tape can not be adjusted!
 - The full adhesive strength is achieved only after at least 24 hours.

Technical Specifications

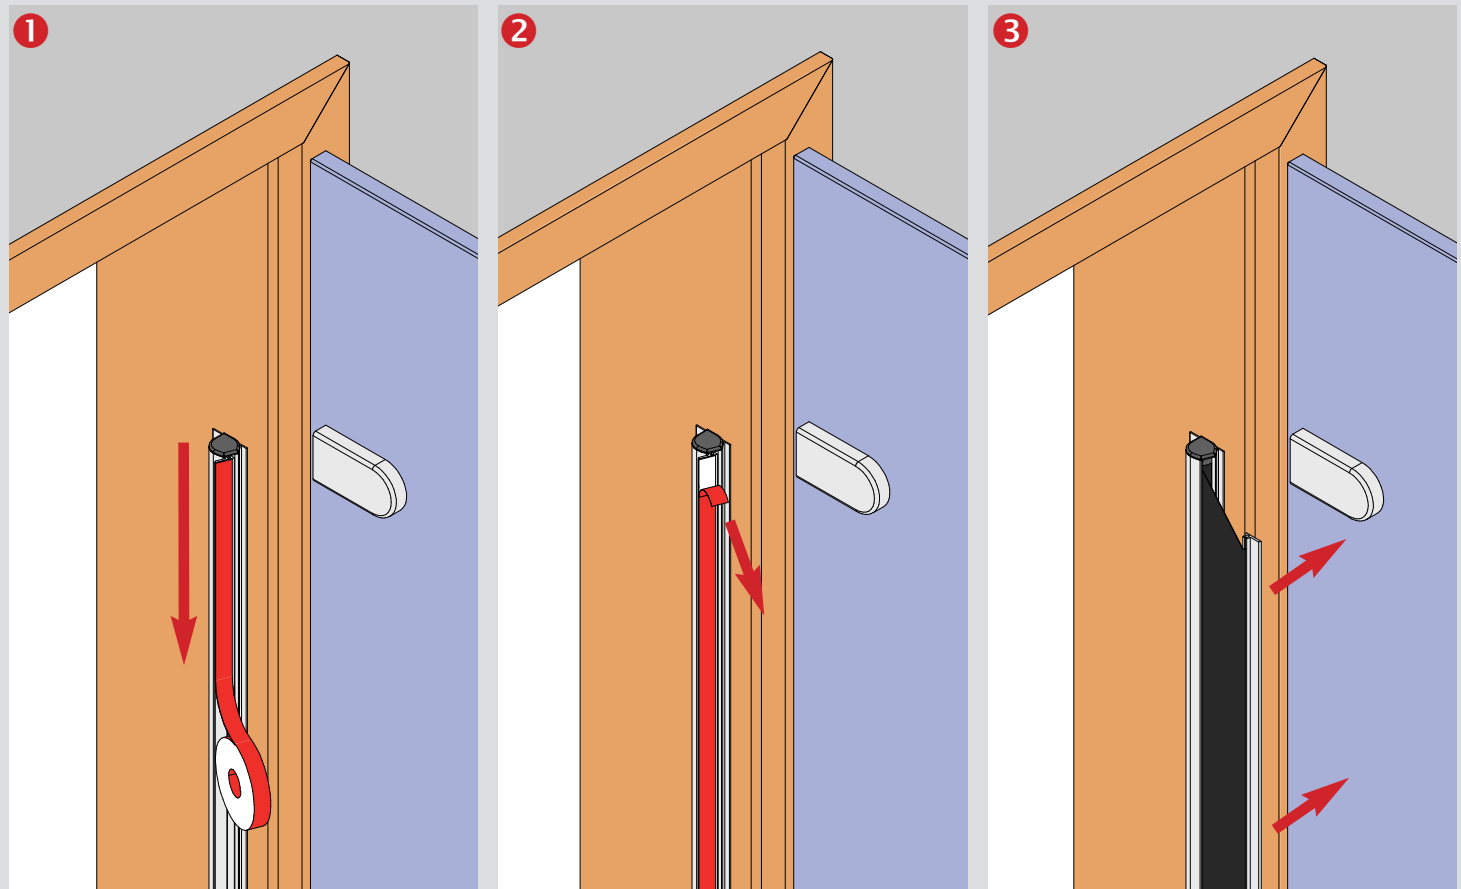

- acrylate-foam-high performance tape
- transparent
- total thickness 1 mm
- adhesive force according to DIN EN 1939: 35N/25mm
- temperature resistance – 40°C bis + 120°C
- UV- and weather-resistant

Alternative installation applications

* 25 mm minimum distance required. According to BS EN 349.

Fitting

The use of finger protection does not obviate the duty of supervision. Technical specifications are subject to change.
